Summary

Full-Stack & Smart Contract Developer currently working in FinTech and experienced in building modern web, mobile, and decentralized applications using React, Next.js, Node.js, Express.js, and NestJS. Proficient in developing responsive frontend interfaces, designing RESTful APIs, and building scalable backend architectures. I also specialize in architecting secure, optimized smart contracts using Rust and Anchor, bridging the gap between traditional fintech systems and the blockchain with a focus on performance, security, and scalability.

Skills

Languages

HTML, CSS, JavaScript, TypeScript, Node.js, Rust

CSS Frameworks

Tailwind, Bootstrap

Version Control

Git, Github

Backend Frameworks

Express.js, NestJS

Frontend Frameworks

React, Next.js

UI Libraries

Material UI, Chakra UI, Shad CN

Blockchain Tooling

• Rust, Anchor, @solana/web3.js

Mobile Development

React Native, Expo

Design Tools

Figma

Backend Services

Firebase, Supabase

Education

BSc in Computer Science, University of Ibadan

- Strong foundation in algorithms, data structures, and software development.
- Hands-on experience with web technologies: HTML, CSS, JavaScript, React.js, and databases.
- Led teams in course projects.

Professional Experience

Frontend Engineer, Blinqpay

- Architected core modules for the Embedded Finance Admin portal (partners, customers, virtual accounts, KYC) and engineered the Rate Pusher app for centralized FX rate aggregation and markup distribution.
- Built main features for the Investment web platform, including liquidations management, wallet integrations, analytics tracking, and investor detail dashboards.
- Developed the Qwid brand website  and integrated secure onboarding and 2FA authentication flows for the Qwid Partner Portal.

Full-Stack Developer, Onegrowth

- Designed and built a high-performance landing page, Super Admin panel, and User Dashboard using Next.js and Tailwind CSS.
- Developed the backend architecture using Node.js, Prisma, and database systems, implementing automated newsletters and Puppeteer-driven PDF generation.
- Managed the entire product lifecycle from initial design and database schemas to production deployment.

Frontend Developer, OpenHealth

- Migrated the frontend codebase from Create React App (CRA) to Vite, improving build speed and development workflow.
- Redesigned and developed the landing page, user dashboard, and admin dashboard using React and Tailwind CSS.
- Developed an interactive chatbot interface and collaborated with backend developers to secure and integrate endpoints.
- Provided UI/UX suggestions to improve accessibility, user experience, and modern frontend best practices.

Full-Stack Lead Engineer, Korvix Event

- Engineered an event ticketing platform with real-time QR code validation and integrated Paystack payment processing with webhook handlers for ticket distribution.
- Architected a multi-role dashboard ecosystem (User, Organizer, Admin, Support) featuring permission controls, livestreaming, seat mapping, and VIP table management.
- Built serverless infrastructure via Supabase Edge Functions for transactional services, managing the entire database design, security policies, and deployment lifecycle.

Projects

LingoPulse, , AI-Powered Real-time Translation Chat Platform

- Developed a high-performance React & Tailwind platform featuring AI-driven real-time translation and instant voice-to-text transcription to eliminate global language barriers.
- Engineered a robust Firebase backend for secure authentication and real-time sync of professional chat features, including read receipts, message reactions, and dynamic room administration.

Terminally AI , Intelligent Terminal Assistant

- Architected a high-performance CLI using Node.js and Gemini AI to translate natural language prompts into context-aware, executable shell commands.
- Engineered a multi-layered safety protocol featuring a Risk Engine and Visual Simulation to predict command impact (files, disk, processes) before execution.
- Implemented a smart diagnosis system that captures shell errors and leverages AI to provide instant one-line fixes and detailed recovery explanations.

FutureTech , Modern Blogging Platform

- Developed a feature-rich blog platform using Next.js and Supabase for content management and user authentication.
- Implemented a clean and responsive UI with Tailwind CSS for optimal user experience across devices.
- Integrated dynamic content fetching, allowing users to read and post articles seamlessly.

PayAjo, Group Savings & Peer-to-Peer ROSCA Platform

- Developed a cross-platform group savings web and mobile application utilizing Next.js, Flutter, and Firebase, featuring real-time group chat channels and message reactions.
- Engineered automated contribution cycles, real-time participant activity logs, and a dynamic risk-scoring engine to monitor member reliability.
- Integrated secure local payment gateways and digital wallet APIs to facilitate automatic deposits, cycle payouts, and real-time ledger updates.

Certificates

Frontend Developer (React) – HackerRank Certified
