

Abanikannda Sultan Full Stack & Smart Contract Developer

 sultanabaniks@gmail.com  +234 703 688 6069  github.com/devsultan06  <https://www.devsultan.app/>

Summary

Full-Stack JavaScript and Smart Contract Developer experienced in building modern web and decentralized applications using React, Next.js, Node.js, Express.js and NestJS. Proficient in developing responsive front-end interfaces, designing RESTful APIs, and building scalable backend architectures. I also specialize in architecting secure, optimized smart contracts using Solidity and Foundry bridging the gap between traditional systems and the blockchain. Focused on performance, maintainability, and delivering excellent user experiences.

Skills

Languages

HTML, CSS, JavaScript, TypeScript, Node.js, Solidity

CSS Frameworks

Tailwind, Bootstrap

Version Control

Git, Github

Backend Frameworks

Express.js, NestJS

Frontend Frameworks

React, Next.js

UI Libraries

Material UI, Chakra UI, Shad CN

Blockchain Tooling

Foundry, Hardhat, Ethers.js, Viem, Wagmi

Mobile Development

React Native, Expo

Design Tools

Figma

Backend Services

Firebase, Supabase

Education

BSc in Computer Science, University of Ibadan

- Strong foundation in algorithms, data structures, and software development.
- Hands-on experience with web technologies: HTML, CSS, JavaScript, React.js, and databases.
- Led teams in course projects.

Professional Experience

Frontend Developer, OpenHealth

04/2025 – 06/2025

- Migrated the frontend codebase from Create React App (CRA) to Vite for faster builds and improved developer experience.
- Contributed to the development and revamp of OpenHealth's landing page and user dashboard.
- Built and integrated a responsive admin dashboard with real-time data using React.js and Tailwind CSS.
- Implemented a chatbot interface to improve user interaction and accessibility.
- Advised the team on UI/UX best practices and frontend security approaches to better protect user data.

Full-Stack Lead Engineer, Korvix Event

03/2026 – Present

- Engineered a high-performance event management platform featuring an automated digital ticketing system with dynamic QR codes and real-time entry validation.
- Integrated Paystack payment gateway with robust webhook handling to ensure instant transaction verification and secure ticket distribution.
- Architected a complex multi-role ecosystem including User, Organizer, Admin, Support, and Operation Manager dashboards with granular permission controls.
- Developed advanced event modules including Livestream access fulfillment, interactive Seat Mapping, and VIP Table management for hybrid events.
- Built scalable serverless infrastructure using Supabase Edge Functions to handle high-volume transactional emails and real-time payment notifications.
- Managed the entire product lifecycle, from database schema design and multi-tenant security policies to full-scale production deployment.

Full-Stack Developer, Onegrowth

02/2026 – 03/2026

- Designed and built a high-performance Landing Page using Next.js and Tailwind CSS, focusing on a modern and clean look.
- Built the full-stack architecture for the platform, including the Super Admin panel and the User Dashboard.
- Developed key features such as an automated newsletter system and a professional PDF receipt generator using Puppeteer.
- Created the backend system using Express.js and Prisma to manage accounts, content, resources, programs and payments.
- Managed the entire product lifecycle from initial design and development to full deployment.

Projects

LingoPulse, , AI-Powered Real-time Translation Chat Platform

- Developed a high-performance React & Tailwind platform featuring AI-driven real-time translation and instant voice-to-text transcription to eliminate global language barriers.
- Engineered a robust Firebase backend for secure authentication and real-time sync of professional chat features, including read receipts, message reactions, and dynamic room administration.

Terminally AI , Intelligent Terminal Assistant

- Architected a high-performance CLI using Node.js and Gemini AI to translate natural language prompts into context-aware, executable shell commands.
- Engineered a multi-layered safety protocol featuring a Risk Engine and Visual Simulation to predict command impact (files, disk, processes) before execution.
- Implemented a smart diagnosis system that captures shell errors and leverages AI to provide instant one-line fixes and detailed recovery explanations.

FutureTech , Modern Blogging Platform

- Developed a feature-rich blog platform using Next.js and Supabase for content management and user authentication.
- Implemented a clean and responsive UI with Tailwind CSS for optimal user experience across devices.
- Integrated dynamic content fetching, allowing users to read and post articles seamlessly.

Lanfriq , Real Estate Tokenization Platform

- Developed a premium real estate investment platform enabling fractional property ownership through secure SPV structures.
- Implemented **NFT-backed receipts** to ensure transparency and liquidity for African property assets.
- Built the interface to handle complex Web3 interactions while maintaining a premium User Experience.

AgroHive , Agricultural Ecosystem & Marketplace

- Architected a complete end-to-end agricultural platform encompassing a consumer-facing Landing Page, a cross-platform Mobile App for farmers, a secure Admin Dashboard, and a high-performance Backend infrastructure.
- Developed a conversion-focused Landing Page & Admin Dashboard using React, Tailwind CSS, and Chart.js, enabling administrators to seamlessly track live revenue analytics, manage product inventory, and monitor user engagement. 
- Engineered a cross-platform Mobile App (iOS/Android) using React Native (Expo), featuring an intuitive e-commerce setup with secure Paystack payment integration, real-time weather forecasting, and interactive farming guides.
- Built an interactive social community into the mobile app allowing farmers to publish posts, share media via Cloudinary, and interact through comments, likes, and follows.
- Designed a scalable Backend architecture leveraging NestJS, PostgreSQL (Prisma ORM), and Redis caching to handle complex relational data, ensuring lightning-fast performance across all client applications.
- Implemented a multi-layered security and notification system using JWT authentication, Resend for OTP-based email verification, and Firebase Cloud Messaging for real-time mobile push notifications.

Certificates

Frontend Developer (React) – HackerRank Certified
